Course Description
Internet and E-mail for semi-Beginners
The ability of computers to communicate with each other has lead to the creation of a world-wide information resource known as the internet. This resource is now easily accessible to everyone through the World Wide Web (WWW or "The Web" or W3), the graphical entryway to the internet. This course will provide participants with an introduction to the Web and its many applications. These include electronic mail (email), search techniques using search engines, downloading data files and software, access to electronic job banks, library, medical and other databases, home banking, and much more. The material will be presented using a mixture of lecture and hands-on practice.
Web Page Design *
This course focuses on creating webpages. In this course, the participant will learn the basics of HTML, the computer language for creating webpages, as well as some advanced features. In addition, the participant will learn how to upload their webpage to the Internet and register the URL with search engines. At the end of the course, the participants will have created a simple webpage, containing text, graphics and other components that they can save onto a disk and publish it on the Net.
MS Power Point 2000 *
This course focuses on creating slide presentations. In this course, you will learn the basics of Powerpoint, which is the industry standard software for oral presentations using a computer. You will learn how to create a slide presentation, then how to "dress it up", using special effects, color illustrations, sounds, music and even film clips. At the end of the course, you will have created a complete slide presentation on a topic chosen by the class. Everyone will have the opportunity to work hands on in building this presentation.
MS Excel 2000 & 97 *
The electronic spreadsheet has become universal in the business environment. Spreadsheet programs have replaced other more traditional means for carrying out everything from budgeting to inventory management. Microsoft Excel has become one of the standards used by businesses everywhere. In this course, you will be introduced to the Excel documents containing formulas, functions, charts and graphics. The material will be presented using a mixture of lecture and hands-on practice.

*Advanced course:
requires a knowledge of WINDOWS 98/ME/XP O/S

Course Description
Windows 98/ME/XP& Software Applications (For beginners)
Addressed to people with little or no previous experience in the use of personal computers (PC's), this course offers basic instruction to the user in accessing programs that run on Windows Operating System in IBM compatible PC's, as a first step in becoming computer literate.
Introduction to MS Word 2000 & 97
This course covers most of the features of MS Word, one of the most popular text editors in the market today. During the eight hours of hands-on instruction (with a Pentium computer per student) you will be shown how to use Word to the full extent of its capabilities in the office, study or home environments. After successfully completing the course, you will be able to prepare personal letters, long general texts and academic papers, as well as perform intermediate desktop publishing.

Senior Link Course Description
Introduction to Windows XP/98/ME, WordPad and Internet and E-mail
Basic word processing skills using WordPad. Drag & Drop techniques using the mouse in a software called Paint. How to use the IE browser. How to send & receive e-mails.
Advanced SeniorLink (knowledge of WordPad/Word & Internet required)
Saving & retrieving files, images & webpages. Working with folders & deleting and restoring files. Online greeting cards using MS -Word basics and stationery (WordArt & page borders. Customising the desktop icons, wallpaper, screensaver & window appearance.

The courses, seminars and workshops can also be given in French, should there be sufficient demand.

We are always open to suggestions on topics to cover in additional workshops. Please do not hesitate to contact the centre, should you have any questions, suggestions or comments.

Workshops & Seminars: Short practical introductory courses to a variety of current interests in a computer environment. A knowledge of WINDOWS O/S & Internet is required
How to choose a PC computer
1. Determine the type of computer you need 2. Determine the attributes you want on your new computer 3. Choose a specific make and model 4. Find the best retailer and buy your computer
How to surf the net effectively
You can increase the accuracy of your searches by adding operators that fine-tune your keywords. You can also search by date, language, location and other restrictions.
Build a simple web page (two sessions)
Publish your resumé, share family photos, or connect with others who share your interests. With Yahoo! PageWizards and Yahoo! PageBuilder learn to use basic HTML to create simple web pages. Open a free account with Yahoo Geocities and upload your webpages to your own web address.
How to customize the computer folders, toolbars, etc
Get the most out of your Windows operating system by learning about the different functions and what they can do to make your computer work better. Organize the folders, also called directories, on your computer to keep all your programs and documents where you can easily find them.
Banking on the Internet
Manage your financial life. Real time. Any time. Online Banking is anywhere you have Internet access. With the Royal Bank Website as an example, learn how to check your account activity and balances & pay bills.
How to protect a computer from Internet intruders
The main purpose of the course is getting a broad understanding as to what threats are in the Internet and what can be done to protect a computer that is connected to the Internet. The core of the course will be on specific Internet Security software: How to install, configure and run it to ensure maximum security and protection when connected to the Internet.
How to organize and print pictures on the computer
With so many pictures, how do you organize them all? Learn to use Adobe Photoshop Album Starter Edition (free). How you store your images on your hard drive do not matter, you just import the pictures from your camera, CD, Floppy, hard drive, or scanner. With this software you can put one image in multiple categories, provide a description, and perform quick and easy searches.
